

111 patients recruited in 2017

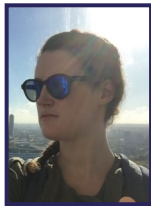

As 2017 comes to a close, we wanted to reflect on some of your achievements this year to date:

-  You have recruited 111 patients
-  25 out of 33 sites have recruited at least 1 patient
-  You have recruited above the monthly target (10.5 patients) in 6 of the past 11 months
-  Special shout-out to Roshan, Oliver, Rita and the team at Barts who recruited 5 patients in November - highest ever by one site in a month!

So thank you for all your support and let's make this final month in 2017 a good one!

New Elf Profile

Name: Ruth Canter
Position: Trial Manager
Previous job: Study Manager at the Intensive Care National Audit & Research Centre (ICNARC)

Interests: Baking, films and TV shows, watching various sports, singing in a local choir, going to the theatre, eating good food.

Best Christmas cracker joke:

What do you call a penguin in the middle of a desert?
Lost

Echo Core-Lab

As we have moved beyond the halfway point of recruitment, we want to reap the rewards of all of your work and also focus on gathering a crucial piece of the trial outcome data.

The REVIVED echocardiography core-lab is now set up and undergoing validation. It is led by Stam Kapetanakis, and coordinated by Matt Ryan and Karen Wilson. The core-lab will provide blinded and independent analysis of the baseline and follow-up echo scans for every trial participant. The team will soon start analysing the scans received so far. If there are any echo scans that have not yet sent, as well as any future scans, please send them as soon as possible to the following address:

 REVIVED Echo Core-Lab 
c/o Karen Wilson
Cardiovascular Division
Lower Ground Floor, South Wing
St Thomas' Hospital
London SE1 7EH

All scans must be labelled with the trial number, time point and fully anonymised prior to sending. For further details on how to anonymise your echo scan, refer to SOP 012.
